Mailbox ENTRY BOX model **SPACE back** cod. **EB201**

INSTRUCTIONS OF USE AND MAINTENANCE

1. Keep the mailbox clean using a soft cloth and water or non-aggressive detergents suitable for painted surfaces periodically. Your mailbox is made from stainless steel AISI 316 (A4), one of the most resistant material, however, in places very close to the sea cleaning cleanings should be frequently performed to remove salt deposits that could cause corrosive spots over time on stainless steel due to chlorine.
2. The plaque is made of solid brass and is protected by transparent varnish: it can be engraved by a qualified engraver. It can be disassembled and reassembled using the 2 screws.
3. The rear flap is equipped with a transparent polycarbonate panel. When cleaning becomes necessary it can be removed from the flap. Remove the key lock (Screw + tab and brass ring + cylinder) and the 4 screws. Clean it and set it back following the same procedure.
4. Your mailbox is numbered and unique. Under the flap an identification tag with a unique code is placed. This provides traceable data and specifications on the production lots.
5. Two unique keys are provided. Keep them safe.
6. Should you have any problems, please e-mail us for assistance at info@essedomus.it
